METHOD OF TRANSMITTING TEXT MESSAGE USING SMS  
MO SYSTEM

Representative drawing

(57) Abstract:

PURPOSE: A method of transmitting a text message using an SMS MO(Mobile Origination) system is provided to transmit a text message by using a personal representative number having a call forwarding function through the SMS MO system, and to

store a desirous receiving number in the personal representative number, thereby always transmitting the text message with the number by only remembering the representative number.

CONSTITUTION: When a user wanting to use a personal representative number text message service registers as a member, the user is given a personal representative number. The representative number is informed to acquaintances. When one of the acquaintances wants to transmit a text message to the member, the acquaintance writes the text message on a cellular phone, and transmits the message by designating a receiving number as the representative number(a). An SMS server(200) recognizes an ID number, and transmits the text message to a communication server(300)(b). The communication server(300) searches a database(400) of the member(c), and finds out a wireless communication terminal number of the member corresponding to the representative number(d). The text message is retransmitted to the SMS server (200)(d,e). The text message is finally transmitted to a terminal (500) of the member corresponding to the representative number(f).
